

IMPORTANT NOTICE

SEROGROUP B MENINGOCOCCAL DISEASE

For information about the outbreak from your school, please click on this link: www.health.rutgers.edu/meningitis

Vaccination Recommendation

Based upon lab testing of the specific outbreak strain at Rutgers University–New Brunswick, the best protection is expected with the full 3-dose series of Trumenba. Therefore, the New Jersey Department of Health (NJDOH) and Rutgers University recommend, with support from the Centers for Disease Control and Prevention (CDC), that Trumenba® be administered to help protect against the particular strain present on the Rutgers University–New Brunswick campus. While one or two doses of Bexsero® or Trumenba® will provide some short-term protection against the specific outbreak strain at Rutgers University–New Brunswick, the best protection is expected to require completion of the full three-dose series of Trumenba® with the second dose given 1–2 months after the first and the third dose 6 months after the first.

Where should I get the recommended vaccination?

This vaccination is covered at the Rutgers Student Health Center, your In-Network Physician and/or an In-Network Pharmacy as listed below. A prescription is not required.

You can start the 3-dose series of Trumenba® by visiting these locations:

- Click here for a listing of the Student Health Center's locations: <http://health.rutgers.edu/location/>
- Click here to find an In-Network Physician: [UnitedHealthcare Choice Plus](#)
